

MIRROR ACRYLIC SHEETS

Acrylic mirrors, also known as plastic or perspex mirrors, represent a contemporary alternative to traditional glass mirrors. Crafted from polymethyl methacrylate (PMMA), a transparent thermoplastic, acrylic mirrors boast a range of features that make them popular in diverse applications. Novalite® Acrylic Mirrors are made from raw materials sourced from the best suppliers in the industry.

Features

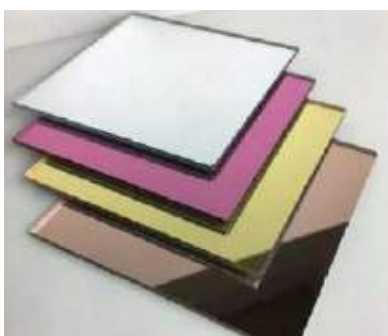

- **Lightweight Design:** Unlike their glass counterparts, acrylic mirrors are notably lightweight, facilitating easier handling and installation. This characteristic is especially advantageous in scenarios where weight considerations are crucial.
- **Versatility in Design:** The malleability of acrylic allows for easy customization, enabling the creation of mirrors in various shapes and sizes. These sheets can be easily cut by CNC router or laser machines. This versatility is ideal for artistic projects, unconventional mirror designs, or tailored applications.
- **Ease of Maintenance:** Cleaning and maintaining acrylic mirrors is a straightforward process. A simple mixture of mild soapy water and a soft cloth can be used without risking damage to the mirror's surface.
- **Cost-Effectiveness:** Acrylic mirrors offer a cost-effective alternative to traditional glass mirrors. This affordability makes them a practical choice for various applications, including commercial displays, retail environments, and home decor.

Application

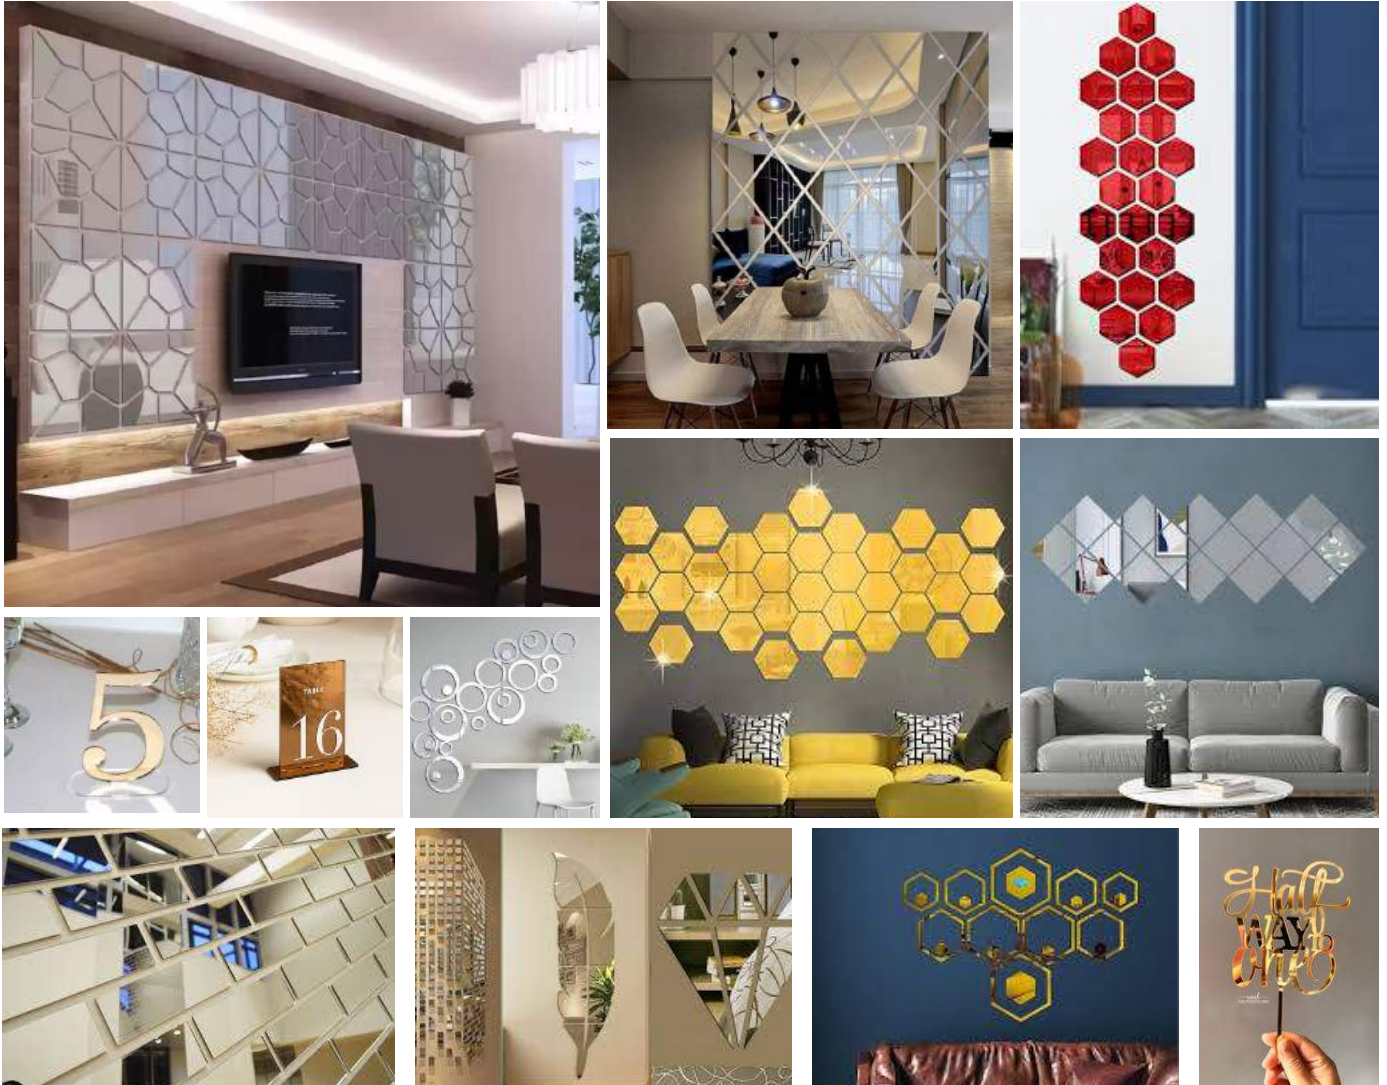

- Interior Designs (Wall, Ceiling, Kitchen Cabinet, Partitions, Cladding)
- Departmental Stores, super Market and Stores window Displays.
- Decoration and Reflectors for Events, Restaurants, Bathroom, Barber shops, Coffee Shop, Stages, Discos.
- POP Billboards and Advertising
- Toys, Teaching Instruments, Gifts and Cosmetic Mirrors
- Garment/Fabric embellishments
